

Swish

Privacy, made simple

Privacy on Solana

Privacy is the next consumer category in crypto

Today on Solana:

- Every transaction is public. Forever.
- 1 Private payment = **3 wallets and a PhD**

The primitives are here. The consumer experience is not.

The wedge

Stripe for private payments

- You don't pick a protocol. You pick a recipient and an amount. Swish does the rest.
- Today: the aggregator. **Tomorrow: unified balance + Pay with Swish.**

Product

Live today on swish.cash

- Send USDC privately. To any wallet or @handle on X.
- Auto-routes across Privacy Cash, MagicBlock, Umbra.

Traction

Solana mainnet, live.

Settled private payments

Builder surface

One widget. One SDK.

SwishPay, a single abstraction that already powers the consumer app today.
Drop-in widget for any Solana app.

The SDK isn't a roadmap item. It's the kernel of the live app.

A code editor window with a dark background and three colored window control buttons (red, yellow, green) in the top left corner. It contains Swift code for using the SwishPay widget.

```
import { SwishPay } from '@swish/sdk';  
  
<SwishPay  
  recipient="@toly"  
  amount={100}  
  currency="USDC"  
>
```

Aggregators become platforms

Same pattern, different domain.

Multiple privacy protocols on Solana. One layer that ties them together.

Business plan

Take rate on embedded volume

- Swish takes a small % of transaction volume routed through it.
- Same model as Jumper, Stripe, Plaid, Razorpay. Infrastructure that scales linearly with the apps it powers.

Consumer product seeds demand. SDK is the business.

Use cases

Where Swish plugs in

Private deposits to embedded wallets

- Funding Privy / Dynamic / Turnkey wallets without doxxing the source.

Risky-business merchants accepting stablecoins

- Cannabis, adult, VPN, creator platforms, OTC.

With KYT, regulated and institutional tier

- Regulated merchants, KYC / AML apps, B2B and institutional flow.

Pay with Swish 

Privacy unlocks the market. KYT keeps it compliant.

One year out

Swish in 12 months

- **Pay with Swish.** Embedded private "Pay with" button on 10+ Solana apps.
- One unified balance. Withdraw anywhere.
- 6+ privacy protocols. Swaps as a feature.
- Mobile app in every store.

Swish.cash

The payments layer for private money on Solana.
